

Quaerens CRM - Complete Department Training Manual

Combined lister, manager, closer and processing training manual.

Document	Audience	Version
Quaerens CRM - Complete Department Training Manual	All CRM Departments	Prepared 02 May 2026

This document explains the Quaerens CRM workflow in practical, step-by-step language. It is designed for training, onboarding, quality control, and management review.

Combined Training Manual

This combined version contains the lister, manager, closer and processing training manuals in one document for management, onboarding and reference.

Use the separate department manuals for day-to-day onboarding. Use this combined version for management review and full workflow understanding.

Lister Training Manual

The following pages cover the staff/lister workflow.

Before You Start

The CRM is role-based. Each person should sign in with their own account so actions, notes, emails, appointments, uploads and status changes are correctly recorded against that user.

- Use the correct login page and never share passwords.
- Check that the correct dashboard opens for your role before working.
- Keep notes factual, short and useful. Avoid opinions that do not help the next department.
- Use the agenda for any future action. If it needs doing later, it should not rely on memory.
- Open the client file whenever you need to understand the wider history of a client.

Golden rule: every important conversation, email, document and next action should leave a clear record in the CRM.

Lister Role Overview

The lister is the first active contact point in the sales workflow. The lister works leads, records call outcomes, sends controlled client-support emails, books call-backs, and sends suitable leads to the manager for review.

Area	What the lister does	CRM location
Lead queue	Reviews new and priority leads, opens the lead record, checks phone/email/campaign details.	Staff dashboard / Lister leads
Calling	Uses the dialer or phone fields to call the client and records the outcome.	Dialer / Lead modal
Email	Sends approved client-support templates only. Staff can edit client name and email address but not rewrite the body.	Client Support Email panel
Progression	Marks interested or qualified leads and sends them to manager review.	Priority Actions
Follow-up	Books callback dates, times and next steps so the client appears in the agenda.	Lead modal / Agenda

Daily Lister Workflow

1. Sign in and check your dashboard

- Open the staff dashboard and confirm your name/account is shown correctly.
- Check daily totals, callbacks, qualified leads and any lead queue figures.
- Open the lister leads area before starting calls.

2. Open a lead

- Click Open on the lead you are working.
- Read the client name, phone, mobile, email, address, postcode, campaign and claim type.
- Check the action history before calling so you do not repeat work already done.
- If deeper context is needed, use Open Client File to view timeline, notes, emails, uploads and follow-ups.

3. Call and record the outcome

- If there is no answer, use No Answer rather than leaving the lead unchanged.
- If you leave a voicemail, select Voicemail.
- If the number is invalid, use Wrong Number so the lead does not stay in the normal queue.
- If the client is not interested, record Not Interested and add a short note.
- If the client wants a callback, enter the callback date and time before saving.

4. Send approved client-support emails

- Use Solar Information Email when the client needs a general explanation of solar issues and eligibility.
- Use Solar Assessment Report Email when the client has asked for or expects their personalised assessment report.
- Use the appointment text generator when a clear appointment message needs to be copied or sent.
- Only correct the client name or email address. The wording is controlled so the message stays compliant and consistent.

Decision Guide

Situation	Correct action	Important note
Client interested but details incomplete	Book callback or send to manager only when enough information exists.	Do not guess missing facts.
Client asks for more information	Send approved information email and record the action.	Use the CRM email button, not a private inbox.
Client may be suitable	Mark Qualified or Send to Manager depending on workflow.	Add short notes explaining why.
Client wants a specific appointment	Use callback/agenda fields and appointment text.	The date/time must be exact.
Client declines	Mark Not Interested and add a factual reason.	Avoid leaving dead leads in the queue.

Quality Checklist

- Every worked lead has a status/outcome.
- Every callback has a date and time.
- Every useful client comment is recorded in notes.
- Emails are sent only through the CRM templates.
- Qualified leads contain enough information for a manager to understand why they were sent forward.
- No client is promised an outcome, refund, compensation or legal result.

Screen-by-Screen Lister Guide

Staff dashboard

- Use this as the starting point for your day. It shows work volume and gives access to the lead tools.
- Check whether callbacks or priority leads need attention before starting new calls.
- If the dashboard does not load, refresh once, then sign out and back in. If it still fails, report the page and error message to management.

Lister leads page

- Use filters to focus on new leads, callbacks, qualified leads or campaign-specific lists.
- Open one lead at a time and finish the action before moving to another lead.
- Use the Open Client File button when you need a wider view of the client history.
- Avoid keeping several lead records open and updating the wrong one.

Dialer page

- Use campaign and queue filters before starting the dialer.
- Check the current lead details before pressing call.
- After each call, choose the correct outcome. This keeps the queue accurate and prevents repeated unnecessary calls.
- Use callback booking if the client asks for a later call. Do not leave callback details only in notes.

Lister Call Handling Standard

Call result	What to do in the CRM	Example note
No answer	Press No Answer and allow attempt count to update.	No answer at 10:15. No voicemail left.
Voicemail	Press Voicemail and note what was left.	Voicemail left asking client to call back.
Interested	Record notes, send suitable template if needed, and book callback or continue intake.	Client interested in solar review. Asked for information email.

Call result	What to do in the CRM	Example note
Callback	Enter exact date/time and save callback.	Client requested callback Friday at 14:00.
Wrong number	Mark wrong number so it leaves the active calling queue.	Number belongs to different person.
Not interested	Record Not Interested and add a short factual reason.	Client declined support and requested no further contact.

Never leave a worked call without an outcome. The CRM only stays useful if every contact attempt is recorded.

Approved Email Templates for Staff

Staff email wording is intentionally controlled. This keeps messages consistent, professional and safer for compliance.

Template	Use when	Staff can edit
Solar information email	The client wants more information after a call or needs the link to the solar support page.	Client name and recipient email only.
Solar assessment report email	The client has asked for or is expecting their personalised assessment report.	Client name and recipient email only.
General information	The case is not solar but needs a basic controlled follow-up.	Client name and recipient email only.
General assessment	A non-solar client needs an assessment-style follow-up.	Client name and recipient email only.

- Check the email address carefully before sending.
- If the email address looks wrong, correct it in the email panel and save/update the lead where needed.
- Do not paste unapproved sales wording into notes or email fields.
- After sending, check that the lead history shows Client Support Email Sent.

Lister Data Entry Rules

Field	Good entry	Avoid
Client name	Use the client's correct name and spelling.	Nicknames unless the client specifically uses them.
Phone/mobile	Keep numbers clean and complete.	Adding notes inside the phone number field.
Claim type	Select the closest matching claim type.	Leaving it blank if the claim type is known.
Campaign	Keep campaign labels consistent, such as solar, finance, housing.	Inventing new spellings for the same campaign.
Notes	Short factual summary of what happened.	Long opinion-based notes or unsupported promises.

End-of-Day Lister Checklist

- All worked leads have an outcome.
- All callbacks have exact date and time.
- All interested clients have either an intake action, email action, manager handoff or callback.
- No qualified leads are left without notes explaining suitability.
- No private notes or external spreadsheets are being used instead of the CRM.
- You have logged out at the end of your session.

Manager Training Manual

The following pages cover the manager review and oversight workflow.

Before You Start

The CRM is role-based. Each person should sign in with their own account so actions, notes, emails, appointments, uploads and status changes are correctly recorded against that user.

- Use the correct login page and never share passwords.
- Check that the correct dashboard opens for your role before working.
- Keep notes factual, short and useful. Avoid opinions that do not help the next department.
- Use the agenda for any future action. If it needs doing later, it should not rely on memory.
- Open the client file whenever you need to understand the wider history of a client.

Golden rule: every important conversation, email, document and next action should leave a clear record in the CRM.

Manager Role Overview

The manager controls quality and progression. Managers review leads, approve or reject suitability, request more information, assign suitable leads to closers, monitor staff activity and use oversight tools to keep the pipeline healthy.

Area	Manager responsibility	CRM location
Manager dashboard	View staff activity, awaiting review, appointments, overdue reviews and daily snapshot.	manager-dashboard.html
Manager panel	Review individual submissions and decide whether they move forward.	manager-panel.html
Leads overview	Monitor the full lister, manager and closer pipeline.	manager-leads-overview.html
Assignments	Send approved leads to the correct closer with clear notes.	Manager panel / Leads overview

Area	Manager responsibility	CRM location
Risk control	Spot overdue follow-ups, weak evidence, stale cases and pipeline gaps.	Risk dashboard / Client file

Reviewing a Lead

1. Open the manager panel

- Review leads marked as awaiting manager review.
- Open the detail view before making a decision.
- Check client details, claim type, campaign, notes, evidence summary and lister history.

2. Make a decision

Decision	When to use it	What happens next
Approve	The lead appears suitable to progress.	It can be sent/opened for closer assignment.
Need More Info	The lead may be suitable but the evidence or detail is not clear enough.	Staff/lister must gather missing information.
Reject	The lead is unsuitable or should not progress.	The record remains documented but does not move to closer workflow.
Save Review Notes	You have reviewed or updated context but are not changing the status yet.	Notes are stored for audit trail.

3. Send to closer

- Use Open Lead / Send to Closer after approval.
- Select the closer deliberately; do not assign leads blindly.
- Add handoff notes: what was discussed, why it is suitable, what the closer should focus on, and any risks.
- Check the lead appears in the closer dashboard after assignment.

Pipeline Oversight

- Use Leads Overview to see total leads, awaiting manager, qualified, sent to closer, converted and closed counts.
- Filter by campaign, claim type, lister, closer and status to understand where delays are happening.
- Use the agenda and risk dashboard to catch overdue callbacks or stalled clients.
- Use client file view for any client where several departments have worked on the same case.

A good manager note tells the next person what matters, what is missing, and what to do next.

Manager Quality Standards

Standard	Good practice
Evidence	Do not approve a lead if the basic evidence or claim reason is unclear.
Notes	Use factual notes: dates, documents, client comments, risk points and next steps.
Assignment	Send leads to the right closer and avoid duplicate work.
Compliance	Do not promise outcomes. Use careful wording around possible support, review and next steps.
Follow-up	If something must happen later, create or check an agenda item.

Manager Review Criteria

The manager's decision protects the quality of the pipeline. A lead should only progress when there is enough information for a closer to have a useful conversation.

Review area	Approve when	Need more info when	Reject when
Client identity	Name/contact details are usable.	Contact details incomplete but fixable.	No usable way to contact client.
Claim reason	There is a clear issue or dispute.	The issue is vague or unsupported.	Issue is outside current service scope.
Evidence	Client has or can provide basic evidence.	Evidence is missing but likely available.	No evidence and no realistic route.
Commercial fit	Case appears worth closer review.	Value or urgency is unclear.	Low value or unsuitable.
Risk	No obvious compliance or suitability concern.	Risk needs clarification.	Risk makes the case unsuitable.

Manager Panel Button Guide

Button	Purpose	Before clicking
Save Review Notes	Stores your notes without changing the decision status.	Check notes are clear and factual.
Approve	Marks the lead as suitable for progression.	Confirm claim type and evidence are sufficient.
Need More Info	Sends the lead back for clarification.	Write exactly what information is missing.
Reject	Stops the lead progressing.	Record the reason professionally.
Open Lead / Send to Closer	Opens the lead in the overview/assignment workflow.	Confirm the lead has already been approved or is ready for closer review.

Assigning Work to Closers

- Use the manager leads overview when assigning or monitoring closer workload.
- Check closer availability and existing workload before assigning.
- Use clear handoff notes. The closer should immediately understand the client issue, interest level, evidence and next step.
- If a lead has already been assigned, avoid duplicate assignment unless the previous assignment is being replaced deliberately.
- After assigning, confirm the lead status changes to sent to closer or the closer assignment appears in the relevant dashboard.

Good handoff note	Poor handoff note
Client discussed solar inverter failure, finance was not explained properly, has paperwork and wants call after 3pm.	Call client.
Client interested but needs spouse present. Callback booked Monday 11:30. Ask about warranty refusal and installation invoice.	Interested.

Manager Monitoring Routine

- Morning: check awaiting manager review, overdue reviews and booked appointments.
- Midday: check lister activity, callbacks pending and any leads stuck without action.
- Afternoon: check sent-to-closer count, converted count and rejected/closed reasons.
- End of day: review overdue agenda items and make sure urgent client tasks are not left unassigned.

Management value comes from spotting stuck work early. The CRM gives the numbers, but the manager must act on them.

Manager Troubleshooting

Issue	Likely cause	Action
Dashboard count looks wrong	Filters, stale browser tab or delayed refresh.	Press Refresh Dashboard and check filters.
Lead cannot be opened	Page cache or permission issue.	Refresh, sign in again, then report if repeated.
Cannot assign closer	Lead may not be approved or assignment field missing.	Open lead detail, confirm status, then retry from leads overview.
Notes not saving	Connection/auth issue.	Do not leave page; copy notes, refresh, then retry.

Closer Training Manual

The following pages cover the closer workflow.

Before You Start

The CRM is role-based. Each person should sign in with their own account so actions, notes, emails, appointments, uploads and status changes are correctly recorded against that user.

- Use the correct login page and never share passwords.
- Check that the correct dashboard opens for your role before working.
- Keep notes factual, short and useful. Avoid opinions that do not help the next department.
- Use the agenda for any future action. If it needs doing later, it should not rely on memory.
- Open the client file whenever you need to understand the wider history of a client.

Golden rule: every important conversation, email, document and next action should leave a clear record in the CRM.

Closer Role Overview

The closer works approved or booked clients, records call outcomes, sends client-support emails, prepares agreements, attaches assessment reports, records deal figures and moves completed clients into processing.

Area	Closer responsibility	CRM location
Assigned clients	Open booked or assigned clients and review all available context.	closer-dashboard.html / closer-panel.html
Call outcomes	Record contacted, callback, no answer, not interested, qualified or closed.	Closer panel
Emails	Write custom client emails from clientsupport@quaerens.co.uk with Quaerens logo/footer/disclaimer.	Client Email Draft
Agreements	Create and send agreements from admin@quaerens.co.uk using client details and editable fee fields.	Agreement section
Processing handoff	Send closed/paid/ready clients to processing with clear notes and documents.	Closer panel

Working a Client

1. Open the client

- Open the closer dashboard and select the assigned appointment/client.
- Review client and appointment details: name, claim type, appointment date/time, email, mobile and address.
- Check assessment summary and manager handoff notes before contacting the client.
- Use Open Client File where available to view emails, documents, agenda history, agreements and processing activity.

2. Record the conversation

- Choose the correct status/outcome after each call.
- Record deal figures where relevant: due now, paid now, follow-up due and payment link.

- Add concise notes explaining what the client agreed, questioned or still needs.
- Book an agenda follow-up if the client needs to be called again.

3. Send a client-support email

- Use the Client Email Draft section for bespoke messages.
- Check the Send To email address. It is pre-filled but can be corrected before sending.
- Write only the message body. The CRM adds the Quaerens logo, company footer and disclaimer automatically.
- Attach the assessment report PDF if needed.
- Send from clientsupport@quaerens.co.uk using the CRM button.

Creating and Sending Agreements

- Use Write Up Agreement when a client is ready to receive the service agreement.
- Check and edit the date of agreement, service fee amount, success fee percentage and signature/date field.
- Confirm client details before generating the PDF.
- Send the agreement from admin@quaerens.co.uk if the client is ready.
- Once issued or sent, the agreement should appear in the client file and be visible for processing.

Field	Closer can change?	Reason
Agreement date	Yes	Ensures the contract reflects the correct issue date.
Service fee amount	Yes	Allows the agreed fee to match the deal.
Success fee percentage	Yes	Allows the agreement to match the approved terms.
Bottom date/signature date	Yes	Keeps document execution details accurate.
Core legal wording	No	Protects consistency and reduces errors.

Sending to Processing

- Only send to processing once the client is ready for operational handling.
- Make sure notes explain what has been agreed, what has been paid or is due, and what documents are attached or missing.
- Check that client email, phone and claim type are accurate.
- Processing should not have to guess what happened with the client.

Closer Screen Guide

Closer dashboard

- Use the dashboard to see total assignments, contacted clients, booked appointments, closed deals, callbacks and clients sent to processing.

- Open the assigned client from the dashboard or closer panel.
- Check whether any callbacks are due before starting new calls.

Closer panel

- The client and appointment card shows the key client details and current appointment status.
- Deal figures should be updated carefully because processing and management rely on them.
- Assessment and manager notes should be read before sending emails or agreements.
- Use the client file/timeline when you need the wider history.

Closer Communication Rules

- Use CRM email tools so client communication is logged and branded.
- For custom emails, write the client-specific body and let the CRM add the logo, footer and disclaimer.
- Check the recipient email address before pressing Send Email.
- Attach the assessment report PDF where the client expects it.
- Do not use personal email accounts for client communication.
- Keep written promises aligned with what Quaerens can actually provide.

Email type	Sender	Typical use
Custom closer email	clientsupport@quaerens.co.uk	Follow-up, next steps, assessment discussion, payment link reminder.
Agreement email	admin@quaerens.co.uk	Formal issue of agreement PDF.

Agreement Workflow in Detail

- Confirm the client is ready to receive an agreement.
- Open the agreement section and check client details pulled from the CRM.
- Edit only the permitted commercial fields: date, service fee, success fee percentage and bottom date.
- Generate the PDF and review it before sending.
- Send the agreement to the client only when the details are correct.
- Confirm the issued/sent agreement appears in the client file or processing file.

If the agreement fee or success fee is wrong, do not send it. Correct the values first and regenerate the PDF.

Deal Figures and Payment Links

Field	Purpose	Good practice
Due Now	Amount expected immediately.	Use the agreed currency and figure.

Field	Purpose	Good practice
Paid Now	Amount already paid.	Only enter confirmed payment.
Follow-Up Due	Amount expected later.	Use where staged payment or balance remains.
Payment Link	Client payment link or reference.	Check link is correct before emailing.

- If a payment has not been confirmed, do not mark it as paid.
- Record any payment-related client comment in notes.
- If payment is required before processing starts, make that clear in the handoff notes.

Closer End-of-Client Checklist

- Client status and outcome are updated.
- All important call notes are saved.
- Agreement status is clear: not needed, created, sent, signed or pending.
- Assessment report/email has been sent if required.
- Deal figures and payment link are correct.
- Next callback is in agenda if needed.
- Processing handoff notes explain exactly what processing should do next.

Processing Training Manual

The following pages cover the processing workflow.

Before You Start

The CRM is role-based. Each person should sign in with their own account so actions, notes, emails, appointments, uploads and status changes are correctly recorded against that user.

- Use the correct login page and never share passwords.
- Check that the correct dashboard opens for your role before working.
- Keep notes factual, short and useful. Avoid opinions that do not help the next department.
- Use the agenda for any future action. If it needs doing later, it should not rely on memory.
- Open the client file whenever you need to understand the wider history of a client.

Golden rule: every important conversation, email, document and next action should leave a clear record in the CRM.

Processing Role Overview

Processing takes over once a client has moved beyond the closer stage. Processing manages case details, documents, support emails, tasks, updates, payments and the ongoing client file.

Area	Processing responsibility	CRM location
Processing dashboard	View assigned cases, unassigned cases, case stages and work queues.	processing-dashboard.html
Case detail	Open a client case and manage the live processing file.	processing-case-detail.html
Documents	Upload, open and delete case documents received from or sent to the client.	Documents & Reports / Case Document Uploads
Client emails	Send support emails from support@quaerens.co.uk with logo/footer/disclaimer.	Email Client section
Tasks and updates	Track case events, next actions and case health.	Case detail / Client file

Opening a Processing Case

- Open the processing dashboard and select the case you are working.
- Check client name, contact details, claim type, status, source and handoff information.
- Review linked documents: client contract, assessment report, strategy report and payment link.
- Use Open Client File to view the wider journey across lister, manager, closer and processing.

Uploading Documents

Document upload steps

- Choose the correct document type before uploading.
- Select the PDF or file received from/sent to the client.
- Add a short note explaining what the document is and why it matters.
- Click Upload Document and wait for confirmation.
- Refresh the case if needed and confirm the document appears under Uploaded Documents.
- If the wrong file was uploaded, use Delete and confirm the removal.

Document type	Example use
Client Document	Bank statement, client letter, evidence document, photos or paperwork received from client.
Assessment Report	Quaerens assessment report or review document.
Agreement	Signed or issued client agreement.
Other	Supporting material that does not fit another category.

Sending Support Emails

- Use the Email Client section inside the case detail page.
- Emails are sent from support@quaerens.co.uk.

- Check the recipient address before sending.
- Write the email body clearly and keep it factual.
- The Quaerens logo, company footer and disclaimer are added automatically.
- After sending, check that the email appears in the client timeline/client file.

Processing emails should be clear, calm and operational: what has happened, what is needed, and what the client should do next.

Processing Quality Checklist

- Client contact details are accurate.
- Documents are uploaded to the correct client and labelled correctly.
- Wrong uploads are deleted promptly.
- Support emails are sent from the CRM, not from private inboxes.
- Case notes make sense to another team member who opens the file later.
- Any future action has an agenda item or clear task.

Processing Screen Guide

Processing dashboard

- Use this page to see assigned cases, unassigned cases, stage counts and your active workload.
- Prioritise urgent or overdue cases before routine updates.
- Open each case from the dashboard and work inside the case detail page.

Processing case detail

- Use the top summary to understand the client, claim type, source and stage.
- Review Documents & Reports before asking the client for something already uploaded.
- Use Case Document Uploads for any file received from or sent to the client.
- Use Email Client to send operational support emails from support@quaerens.co.uk.

Document Management Rules

Rule	Reason
Upload documents to the correct processing case only.	Wrong-client documents create serious operational and data protection risk.
Use a sensible document type.	It helps other users understand the file without opening it.
Add a short note.	Notes explain context and stop duplicate requests.
Delete mistaken uploads quickly.	Keeps the client file clean and avoids confusion.

Rule	Reason
Do not store client documents outside the CRM unless management authorises it.	The CRM should remain the source of truth.

Processing Email Examples

Scenario	Email should say
Requesting missing evidence	What is missing, why it is needed, and how the client can send it.
Confirming receipt	What was received and what the next review step is.
Case update	What has changed, what is currently being reviewed, and when the client should expect the next update.
Clarifying details	The exact question or detail needed, without unnecessary wording.

- Use plain English.
- Avoid promising a result or timeframe unless it is confirmed.
- Keep client instructions specific.
- Check the sent email appears in the client file/timeline.

Case Health and Follow-Up

- Review case health indicators before closing the page.
- If a signed contract, assessment report, payment link or key document is missing, record the next step.
- If the client needs chasing, create an agenda follow-up.
- If another department must act, add a clear note or task rather than relying on verbal handoff.

Processing Troubleshooting

Issue	Action
Upload stays on uploading	Check file size, refresh, and try again. If error says bucket/rules/permission, report exact wording.
Delete fails	Check your role and report permission-denied if it persists.
Email fails	Check recipient address, then report function/email error if repeated.
Client details missing	Check manager/closer handoff and client file; add note if information must be corrected.
Wrong document uploaded	Use Delete immediately, then upload correct document with a note.
