Property / contact address	Snetterton Farm, Old Buckenham, Attleborough, NR17 1PH

Product And Sale Summary

Field	Details
Product	Spray Foam Loft Insulation
Seller / installer	Eco Spray Foam Systems Limited
Original installer named	Premier Home Improvements
Installation date	10 September 2020
Installation cost	£3,000
Roof replacement date	12 September 2024
Roof replacement cost	£13,000

Case Summary

Mr Fernihough reports that he was not informed of the mortgage, lending and property sale risks associated with spray foam loft insulation. When attempting to sell the property, the sale was reportedly refused due to the presence of the insulation. A survey subsequently identified spray foam applied directly to roofing felt and concluded that removal was not viable without causing substantial damage, resulting in a full roof replacement.

Key Assessment Points

- A failed property sale is reported, which may materially strengthen the claim if supported by written evidence.
- The core allegation is non-disclosure of mortgageability, lending and saleability risks at the point of sale.
- The survey position appears significant because the foam was reportedly applied directly to roofing felt.
- The client reports a £13,000 roof replacement after removal was considered impractical without substantial damage.
- The current evidenced loss is £16,000 before any sale-related or consequential losses are quantified.

Preliminary Claimable Amount Estimate

Potential loss / claim head	Preliminary estimate	Evidence required
Original spray foam installation cost	£3,000	Installation contract, invoice, receipt, proof of payment.
Roof replacement cost	£13,000	Roof replacement invoice, payment evidence, roofer report and photos.
Current evidenced loss	£16,000	Installation and roof replacement documentation confirming sums paid.
Sale related losses	Under investigation	Failed sale correspondence, estate agent notes, surveyor findings, buyer/lender refusal evidence.
Consequential losses	Under investigation	Additional finance, valuation, delay, legal, survey, mortgage or accommodation losses.
Indicative case valuation	£16,000 - £50,000+	Strength depends on documentary evidence for sale collapse, valuation impact and technical findings.

Recommended Evidence Pack

- Installation contract, quote, invoice, receipt and payment proof for the £3,000 spray foam installation.
- Survey report confirming foam location, roofing felt impact, removal viability and recommended remedial works.
- Roof replacement invoice, payment evidence, photographs and any roofer correspondence for the £13,000 works.
- Failed sale correspondence, buyer feedback, estate agent notes and any surveyor or lender refusal evidence.
- Any sales material, messages, call notes or documents showing what was said about risks, suitability and benefits.
- Evidence of consequential losses including valuation impact, delay, legal, survey, finance or mortgage-related costs.

Initial View

On the information presently supplied, this appears to be one of the stronger spray foam files due to the combination of a reported failed property sale and a confirmed £13,000 roof replacement. If supported by documentary evidence, the sale refusal and survey findings could substantially increase the value of the matter. The immediate priority is to collect the technical report, proof of payment and sale-related correspondence so that liability, causation and recoverable loss can be assessed in a structured way.
